

# INSTRUCTIONS

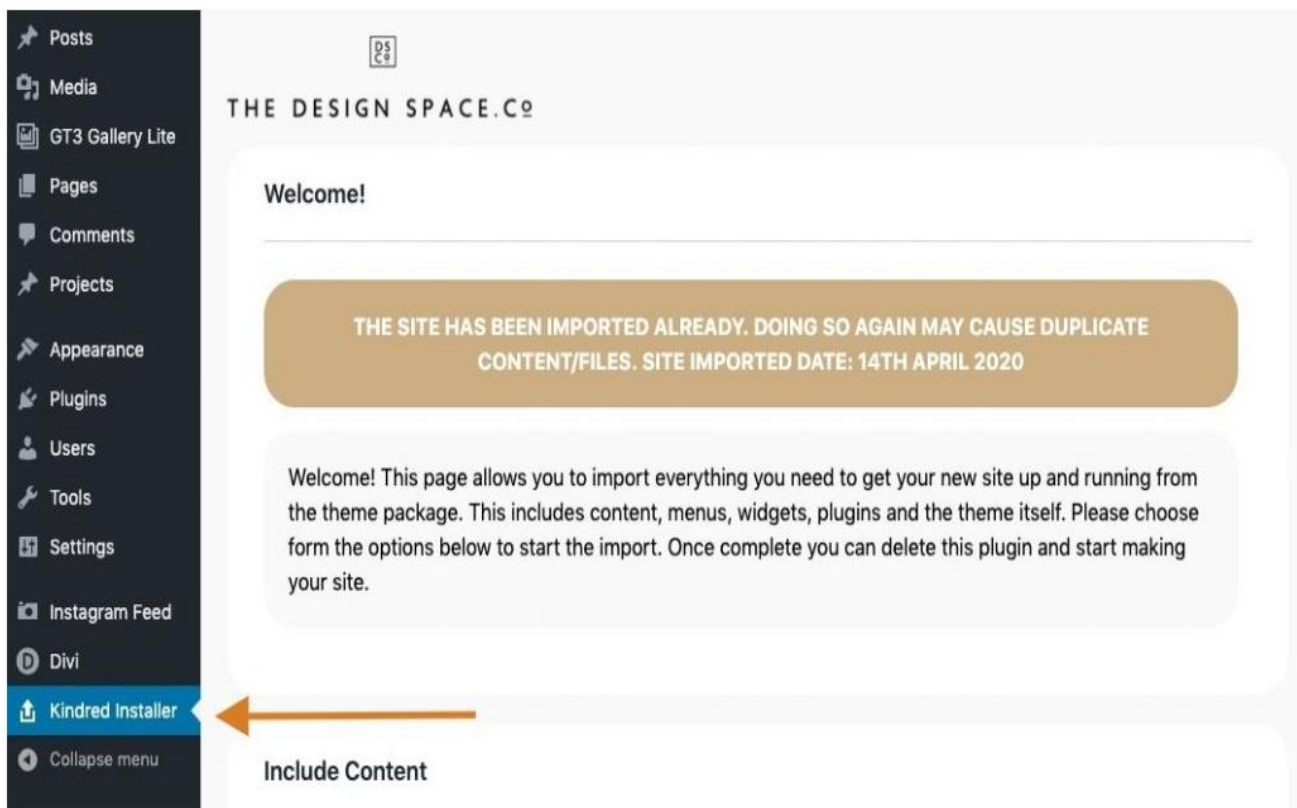

## Export Installer Plugin

**Important Note:** The website's theme needs to be installed and activated in advance prior to using this plugin.

1. Upload the **Export Installer** plugin via the Plugins > Add New area in the left WordPress menu on the dashboard. The custom Installer will show at the bottom of the left menu, showing the name 'Export Installer.' Once you click into Installer area, you will see the ACT Websites logo.

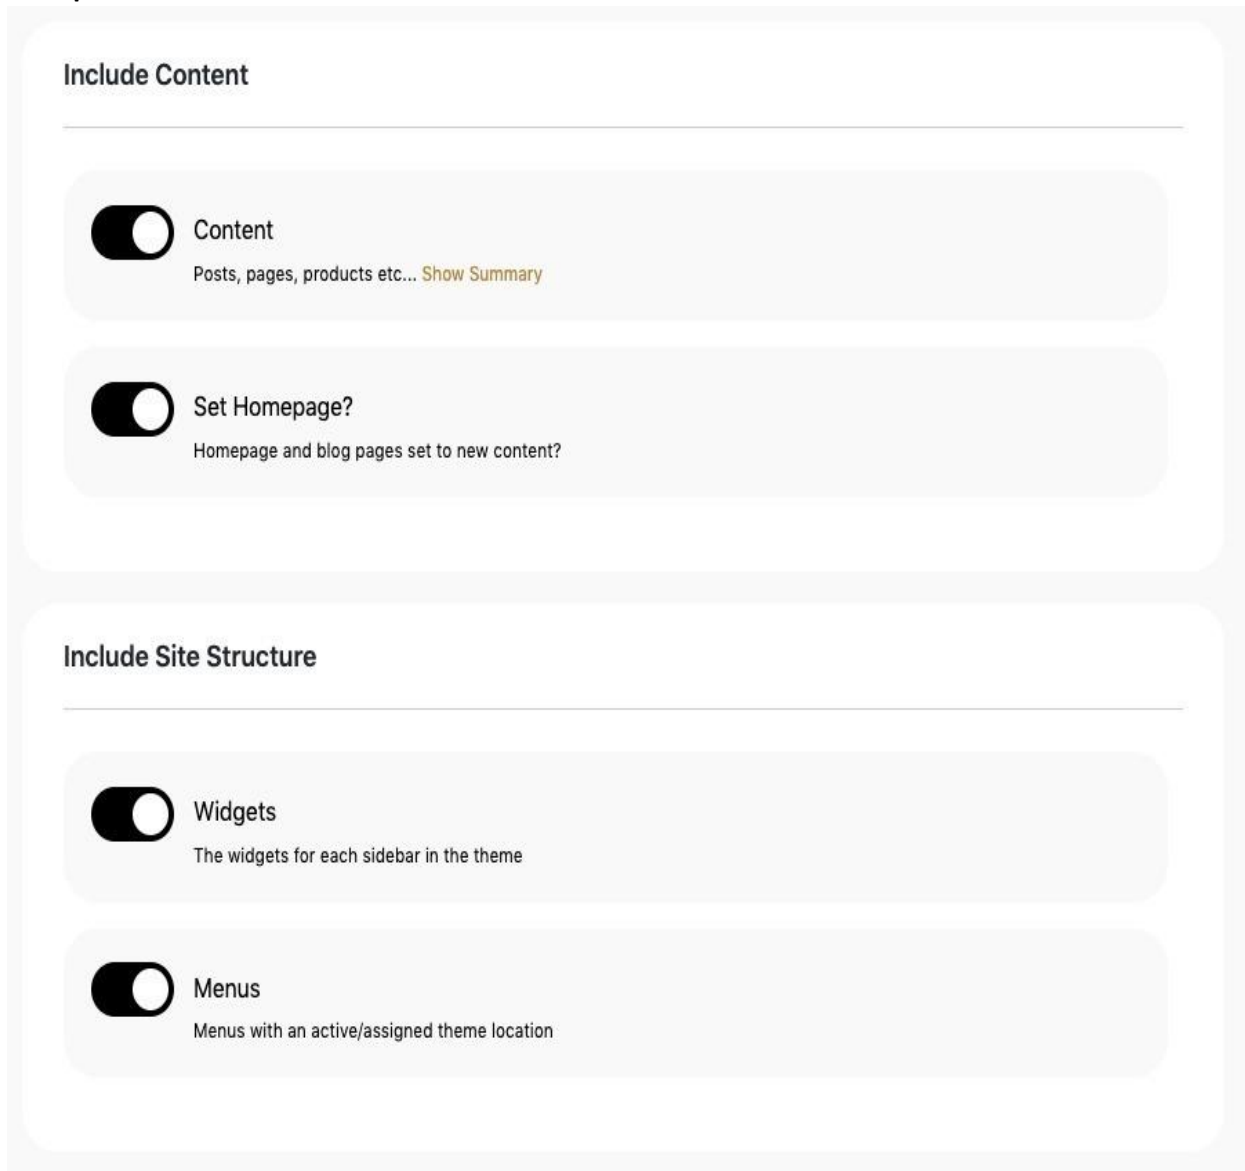

**Note:** The **Export Installer** plugin may appear named as 'Kindred Installer' on the Dashboard.

**Example:**

2. Select all the options for a full installation, then scroll down to press the begin the Import button when you are ready.

**Example:**

**Include Content**

---

**Content**  
Posts, pages, products etc... [Show Summary](#)

**Set Homepage?**  
Homepage and blog pages set to new content?

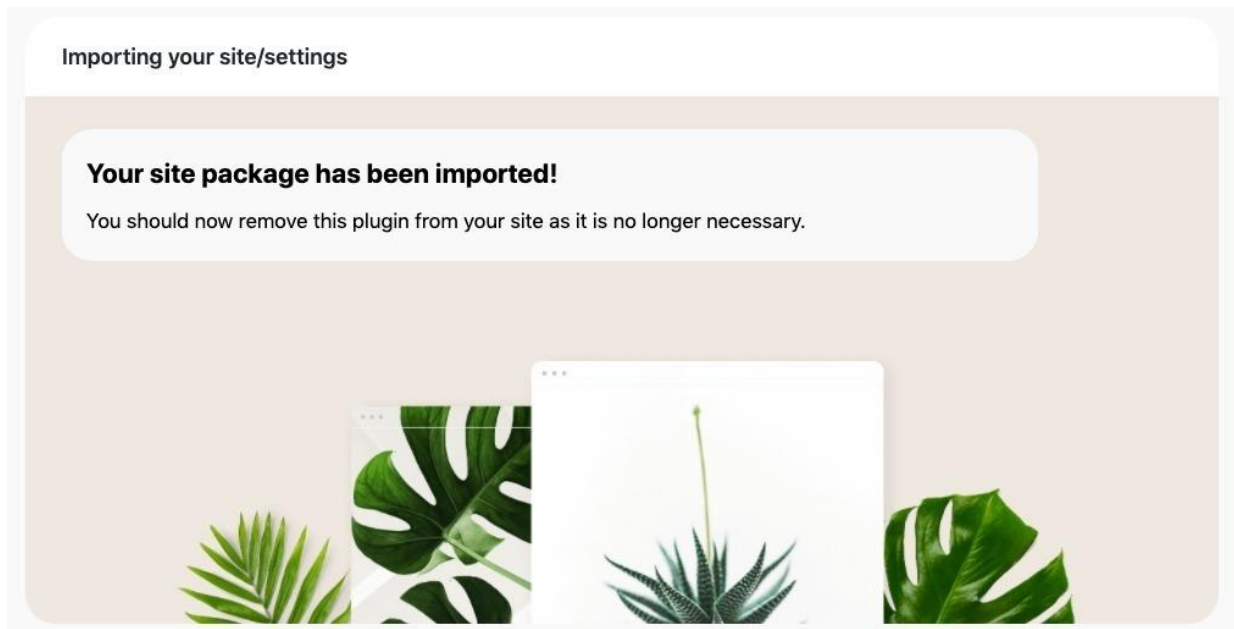

**Include Site Structure**

---

**Widgets**  
The widgets for each sidebar in the theme

**Menus**  
Menus with an active/assigned theme location

3. Once your import is complete, you will be prompted to uninstall the **Export Importer** plugin. The Installer plugin can be safely deleted without affecting any of the imported content.

4. We recommend deleting the plugin after the installation because any unnecessary plugins can create security vulnerabilities over time.

### I AM GETTING AN ERROR MESSAGE

The most common error we encounter is uploading the exported Installer plugin to the Appearance > Themes area.

If you or your customer see the error 'Theme is missing the style.css stylesheet' it means that the plugin has been uploaded to the Themes area in error, instead of the Plugins area.

I hope you have found this documentation easy enough to comprehend. If not, [Get in touch](#).
